

Waypoint Creator Crack Free Download PC/Windows 2022 [New]

[Download](#)

Waypoint Creator Crack + License Code & Keygen

Waypoint Creator Product Key is designed for Windows users. It uses Microsoft's Virtual Earth (VES) engine for map display and handling. This engine provides full support for 3D maps. A new waypoint can be created by clicking a map location. The created waypoint is automatically added to your route. For each created waypoint, two additional GPX files are created. These files are named waypoint.gpx and waypoint.xml. They contain two lines: the location of the waypoint and its ID. You can save the created waypoints in a text file, a GPX XML file, or as GPX file for input into other GPS-oriented applications. Main Features: 1) Easy to use. You can create waypoints by simply clicking locations on the map. The points will be automatically added to the route. 2) Support for Virtual Earth. You can display your waypoints using the standard zoom and scroll functions of the Map Control. 3) Support for GPX files. You can save waypoints into GPX format for input into other GPS-related applications. 4) Waypoint ID. The waypoint ID appears as a new column in the 'Waypoints' tab when you open a GPX file that was created using this version. 5) Spatial Indices. The waypoints can be filtered by distance, by location, by elevation, etc. 6) Standard data. The waypoints can be filtered by altitude, latitude, longitude, date, etc. 7) Standard control and zoom. The map is automatically centered on the selected location when you create a new waypoint. The map is automatically zoomed to the selected location. 8) Support for labels. You can add waypoint labels to the map and/or the waypoints. The labels appear on the map when you select a waypoint. You can also click on a waypoint in order to display the corresponding waypoint labels in a separate window. 9) Colors. You can choose colors to be used in waypoint labels. 10) Colors. You can choose colors to be used in waypoint IDs. 11) Symbols. You can add symbols to the map and waypoints. You can use the icon and text formats. 12) Waypoint Notes. You can add notes to each waypoint. The notes are saved to the waypoint ID for future reference. 13) Date. You can view a waypoint history with the most recent way

Waypoint Creator Crack+ Product Key Full

Keyboard Macro record/playback Play the recorded macros in a sequence (do not play macros when a macro is on) Step forward/backward: press [left/right] Stop play: press [esc] Show all macros: press [f3] Record a macro: press [enter] Load a macro: press [c] KEYMACRO Usage: - Press [f3] to load/start a new Macro - Hold the mouse over the white box to record a new macro - When a Macro is played, it will appear as a highlighted block in white - To step to the next macro: press [left/right] - To play the Macro, press [Enter] - To stop the play, press [esc] - To stop recording a new macro, press [c] - To replay the last played Macro, press [Enter] - To delete a Macro, press [f2] - To go to the next Macro, press [left/right] - To go to the previous Macro, press [esc] - To go back a step, press [f3] MACRO QUICKNOURKEditor Description: - Macro can be used to trigger a short or long nurks (automatically detected) - Macro can also be used to restart nurks (when you go out of the waypoint) MACRO QUICKNOURKEditor Usage: - Select a shortcut key to trigger the Macro - Set a short or long nurk, and configure the trigger point to exit the nurk (using the drop down menu) - Select the Macro to record (using the drop down menu) - Press [Enter] to play the Macro - You can continue to press [Enter] to play the Macro, until you reach the end (where the Macro will stop automatically) - To stop recording a Macro, press [esc] - You can delete a Macro by selecting it and pressing [Delete]

MACRO QUICKNURKEditor Usage: - Choose a short or long nurk, and configure the trigger point (using the drop down menu) - Select the Macro to record (using the drop down menu) - Press [Enter] to play the Macro - You can continue to press [Enter] to play the Macro, until you reach the end (where 2edc1e01e8

Waypoint Creator

Waypoint Creator is a simple way to add waypoints to the Windows 7 GpsNavigator program. It creates waypoints based on GPS coordinates. You can save them as a text file, or export them to a GPX format for input to other GPS applications. You can even open and edit the GPX file directly with the free GPX editor. Description: Waypoint Creator is a simple way to add waypoints to the Windows 7 GpsNavigator program. It creates waypoints based on GPS coordinates. You can save them as a text file, or export them to a GPX format for input to other GPS applications. You can even open and edit the GPX file directly with the free GPX editor. PilotCoPilot is an enhanced Windows Gps Navigator program. It will open *.gpx files, and show all the waypoints and tracks in a new GpsMap interface, or convert *.gpx to *.dat format for loading into a Garmin GPS. And PilotCoPilot has a built in converter for converting *.gpx to *.dat for Garmin MapSource and City Navigator. PilotCoPilot Description: PilotCoPilot is a new enhanced Windows GPS Navigator program. It can open *.gpx files, and show all the waypoints and tracks in a new GpsMap interface, or convert *.gpx to *.dat format for loading into a Garmin GPS. And PilotCoPilot has a built in converter for converting *.gpx to *.dat for Garmin MapSource and City Navigator. GPO is a powerful GPS Logger. It can create tracks and waypoints, save/load tracks as *.gpx files, and export/import tracks into Garmin, Google, or Garmin Tracks, Waypoints & Tracks. GPO Description: GPO is a powerful GPS Logger. It can create tracks and waypoints, save/load tracks as *.gpx files, and export/import tracks into Garmin, Google, or Garmin Tracks, Waypoints & Tracks. Airtrack GPS Logger is a powerful Windows GPS Logger. It can create tracks and waypoints, save/load tracks as *.gpx files, and export/import tracks into Garmin, Google, or Garmin Tracks, Waypoints & Tracks. Airtrack Description: Airtrack GPS Logger is a powerful Windows GPS Logger. It can create tracks and waypoints, save/load tracks as *.gpx files,

What's New In?

* Waypoints from Microsoft Virtual Earth display on a flat world map, not your local area. *

Waypoints may be named whatever you like, whether it makes sense or not. * Save a GPX or text file with your waypoints. * Each waypoint can be up to 12 characters in length. * Waypoints are created as \$GPWPL sentences, which can be validated by the Microsoft GPX validator. * Use GPX directly for printing and offline applications. * Use GIS data directly for online applications like Google Maps, Yahoo Maps, etc. * Waypoints that are automatically added to your route are shown in yellow. * Waypoints can be set to autopark on arrival. * Waypoints can be set to turn based on arrival or destination. Installation: * For XP 32/64 bit: * Extract the zip file to a folder of your choice * Run the exe * Click the waypoint you want to create. * Optionally, click the settings button, and then click the info tab, to access the application settings dialog. * In the File section, select your saved GPX or text file. * In the map section, click "validate". * In the map section, click "save". * Click "add waypoints". More details: The map display is centered on the user's current position. In order to view a different map, select "edit map" from the settings tab. To see your own waypoints, select "list waypoints". To use a different GPX file, select "select GPX file". To use a different map, select "select map". To use a different map and GPX file, select "select map and GPX file". To use a different GPX file and a different map, select "select map and GPX file". The waypoints will be displayed in yellow. The map can be zoomed in on or out of by double clicking the mouse. Each waypoint can be resized, but it must be resized at a scale of 1:1.
