GREAT REVIEW. Thank you for your article! I too am a big fan of LR. I started at PS CS 5 - it was sold to the public as the "professional" version of Photoshop (it was definitely designed for photographers). At that time the LR software was coming out with each new version of PS, sort of like what you mention in the article. But it was quite slow when I bought it. App devs are usually slow to rush the software to market. I can see why you rate this product a 4 out of 5 because it is most definitely not on par with the new CS6 releases for speed and ease of use, but let's face it, with the iPad Pro providing ample horsepower and reliability on photo editing projects, why even use the more expensive SC version? If you are serious about photo editing this is my go-to app! Cheers - have a great one! Has Photoshop been on this list for very long? I'm thinking the last time it was in the top 20 was back sometime in the high durability lifetime. :(I'm not sure if it has sold a fraction of what Photoshop used to sell but in any case, its sales rep is painful right now. I think PS CC is quite amazing as I am a photographer. You can do any image editing with it and get MARVELOUS results. Yes, you need the right editing software for your subject matter that you are most interested in. I use this for general editing and it is excellent for that purpose. It is fast and so stable. I can easily destroy a project and start over from scratch. I have done so many times.

Which software is better for graphic designers?

Adobe Photoshop for graphic designers is the undisputed champion. Photoshop is the de facto standard for photo and image editing. Some designers prefer to use Adobe Photoshop because they believe they need a significant skill-set to effectively use the software. However, Adobe Photoshop is not the *only* choice for graphic designers. First, you'll see the Image Window where you'll drag each of the artwork elements you want to work with (e.g., matter headlines, images, etc.) onto the window. From here you can zoom in on the image to get a digital magnifying glass for cropping or to zoom into and out of the elements. You can also create and store multiple Guides (selective guides) in the Image Window to help Photoshop keep the art in a specific portion of the image. Once you've placed each of your artwork elements into the window, the first thing you'll do is choose the color that you intend to make them all the same. This is done through the Color Picker tool that has a color wheel on it. From here you can change the Whites to brighten them up so that all the paper is white and add some grain or vignette around the edges. Or, you can lighten Blacks to make your whites look more vibrant. There are four different Shadows and a Lightness levels. Shown here are the different Shadows. On the right side of the box is a slider for Lightness and on the left side is a slider for the three different Shadows. 933d7f57e6
