It's now possible to have a truly portable Lightroom workflow. But there is a problem: when you import my tethered images, they automatically get tagged with the date and time they were captured. Lightroom 5.2 handles this flaw superbly, but it's something I think clients and creatives should be aware of. Experience Advanced Mode for quick editing, work with RAW images without conversion or preview a single frame and see the entire preview. While viewing an image in viewfinder or out of viewfinder, click More Info and see all the edit mode controls or previews. Your adjustments stay in Advanced Mode, and you can continue editing in other editing modes or add content for later in the editing process. With the latest update, you can now convert Black and White photos to color with a single click. In addition, the dyes now mix together, rather than "assign" each color to the subject in photographs taken in mixed lighting conditions. You can preview, adjust and save or export your new Black and White color photos. Just select the color, and the dyes will automatically start mixing. Each render will let you fine-tune the colors of the blend. Then use the Adjustment Brush to paint on the dyes, and the blending process will continue until the image is the way you want it. Lightroom 5.2 brings a new feature to manipulate the look of your images in your image sequence. "Adjust" Camera Lens Correction and Color. This feature lets you to systematically correct for "camera lens errors" in Lightroom. The Adjustment Brush lets you correct for Chromatic Aberration and spatter, image flickering and zipper noise. Color Correction lets you correct for vignetting in the lens.

What It Does: You can erase details from within the image, then add or remove details from a photo or text box (the brush tool works with shapes too). You can create adjustment layers and set the amount of change in those adjustments. You can even use Live Shoppers to get live feedback on your changes. It's easy to work on more than one layer, ensuring your design is complete. What's great is that you can send a version of your file to a friend and then they can work on it as well. Usually, the images that you've work on in this program aren't visible to anyone else that is working on it, but you can still work in small pockets of the file to make sure it's done correctly. To preview your final graphics, click the **Generate Image** button. Or if you prefer to review your work on a regular basis, you can click the **Preview Preset** button. If you like what you've done, you can Save As the generated or preview image under a new name. If you don't like the generated image, click the **Discard Preset** button. **What It Does:** The Paths and Guides panel lets you create guides and paths to define different shapes and lengths on a layer. With Paths, you can create multiple paths, make one line a closed shape, and use either the Freehand tool or the Pen tool to draw straight lines. You can also move these shapes around your layers and even resize your guides. **What It Does:** The Content panel is the area where you make adjustments for your pictures. But, it doesn't stop there. You can use this area to change the way a picture looks, add new textures, and edit shadows, all from one place. With the Draw and Fill tools, you can do sketchy work and create shapes, and there are a ton of other tools you can easily access as well. e3d0a04c9c
